## to Solar Industrial Complex (SIC) in St. Croix County

- Did you know Xcel Energy is proposing the 10 Mile Creek solar project that will change the face of our county?

- Solar panels will cover over 5000 acres of prime farm land.

- That's almost 8 square miles of solar panels. Enough to cover the city of New Richmond.

- **Find out more information at our website [SaveOurHeartland.com](http://SaveOurHeartland.com)**  
**We are citizen journalists dedicated to reporting on this issue.**

- At this big of a scale it can negatively impact wildlife, groundwater, human health, property values, increase risk of fire, and devastate the land making it unusable for future generations.

- Industrial sized transmission lines would cross over 15 miles of the county from Highway 63 to Bayport, MN. Trampling over farm fields and backyards along the way.

- This massive complex would surround neighborhoods and park conservation areas right here in St. Croix County.
